Historical gas-phase IP comparison: preserve model-specific sample membership
(a) Native available sets; n is explicit for every arm
Kendall tau_b
MAE vs gas-phase anchor (eV)
P0prime xTB dSCF; n=10
MAE=4.481 eV; tau_b=0.911
P1 r2SCAN-3c; n=12
MAE=0.251 eV; tau_b=0.727
P0 Koopmans; n=12
MAE=1.377 eV; tau_b=0.606
(b) Same ten molecules for all three arms
Computed minus anchor (eV)
P0 Koopmans
P0prime xTB dSCF
P1 r2SCAN-3c
